

CLOUD COMPUTING CONCEPTS

with Indranil Gupta (Indy)

INTRODUCTION TO CLOUDS

Lecture B

WHAT IS A CLOUD?

WHAT IS A CLOUD?

- It's a cluster!
- It's a supercomputer!
- It's a datastore!
- It's Superman!

- None of the above
- All of the above

- Cloud = Lots of storage + compute cycles nearby

WHAT IS A CLOUD?

- A single-site cloud (aka “datacenter”) consists of
 - Compute nodes (grouped into racks)
 - Switches, connecting the racks
 - A network topology, e.g., hierarchical
 - Storage (backend) nodes connected to the network
 - Front-end for submitting jobs and receiving client requests
 - Software services
- A geographically distributed cloud consists of
 - Multiple such sites
 - Each site perhaps with a different structure and services

A SAMPLE CLOUD TOPOLOGY

So then, what is a cluster?
